ELSEVIER

Comput. Methods Appl. Mech. Engrg. 130 (1996) 397–400

Computer methods in applied mechanics and engineering

Subject Index of Volume 130

Asymptotic methods

An asymptotic variational formulation for dynamic analysis of multilayered anisotropic plates, J.-Q. Tarn 337–353

Boundary element methods

Computational acoustics: noise reduction via diffraction by barriers with different geometries, A. Piacentini, M. Invernizzi and L. Pannese 81– 91

A non-linear method for the propeller–rudder interaction with the slipstream deformation taken into account, D.-Q. Li 115–132

The numerical determination of the Kelvin impulse of a bubble close to a submerged rigid structure, P.J. Harris 195–202

Collocation method

A 2D Chebyshev differential operator for the elastic wave equation, J.M. Carcione 33– 45

Coupled problems

A non-linear method for the propeller–rudder interaction with the slipstream deformation taken into account, D.-Q. Li 115–132

Dynamics

A practical algorithm for the efficient computation of eigenvector sensitivities, R.M. Lin, Z. Wang and M.K. Lim 355–367

Assessment of temporal integration schemes for the sensitivity analysis of frictional contact/impact response of axisymmetric composite structures, L. Karaoğlan and A.K. Noor 369–393

Electromagnetic fields

Free vibration analysis of multilayered composite plates and shells with the natural approach, J. Zhu 133–149

Finite difference methods

A subdomain residual method for a posteriori error estimates of finite element solutions of viscoelastic fluid flows, H. Jin 93–113

On a new time integration method for solving time dependent partial differential equations, W. Zhong, Z. Jianing and X.-X. Zhong 163–178

Comparison of several discrete arithmetic schemes for simulating a constrained jet and a lab-scale tangential fired furnace, X.-Y. Zhou, C.-G. Zheng and Yu.-Y. Ma 279–288

High-Reynolds number solutions of Navier–Stokes equations using incremental unknowns, O. Goyon 319–335

Finite element and matrix methods

A unified contact algorithm based on the territory concept, Z.-H. Zhong and L. Nilsson 1– 16

Estimated error bounds for finite element solutions of elliptic boundary value problems, A. Mashaie, E. Hughes and J. Goldak 17– 31
A 4-node finite shell element for the implementation of general hyperelastic 3D-elasticity at finite strains, P. Betsch, F. Gruttmann and E. Stein 57– 79
Free vibration analysis of multilayered composite plates and shells with the natural approach, J. Zhu 133–149
Thermoviscoelastic contact analysis with friction by an incremental thermal relaxation procedure, C.-M. Chang and W.-H. Chen 151–162
Stability of finite element models for distributed-parameter optimization and topology design, C.S. Jog and R.B. Haber 203–226
The simulation of texture evolution with finite elements over orientation space. I. Development, A. Kumar and P.R. Dawson 227–246
The simulation of texture evolution with finite elements over orientation space. II. Application to planar crystals, A. Kumar and P.R. Dawson 247–261
A rational model for the distortional buckling of tapered members, H.R. Ronagh and M.A. Bradford 263–277
An incremental elastic-plastic Finite Element solver in a workstation cluster environment. Part I. Formulations and parallel processing, A. Feriani, A. Franchi and F. Genna 289–298
An incremental elastic-plastic Finite Element solver in a workstation cluster environment. Part II. Performance of a first implementation, A. Feriani and F. Genna 299–318
An asymptotic variational formulation for dynamic analysis of multilayered anisotropic plates, J.-Q. Tarn 337–353
Assessment of temporal integration schemes for the sensitivity analysis of frictional contact/impact response of axisymmetric composite structures, L. Karaoğlan and A.K. Noor 369–393

Fluid mechanics

Combined distributed and lumped parameters model for transient flow analysis in complex pipe networks, K.P. Ivanov and E.G. Bournaski 47– 56
A subdomain residual method for a posteriori error estimates of finite element solutions of viscoelastic fluid flows, H. Jin 93–113
The numerical determination of the Kelvin impulse of a bubble close to a submerged rigid structure, P.J. Harris 195–202
High-Reynolds number solutions of Navier–Stokes equations using incremental unknowns, O. Goyon 319–335

Fracture mechanics

A computational framework for a class of fully coupled models for elastoplastic damage at finite strains with reference to the linearization aspects, E.A. de Souza Neto and D. Perić 179–193

Incompressible and near incompressible media

A non-linear method for the propeller–rudder interaction with the slipstream deformation taken into account, D.-Q. Li 115–132

Modern computer architecture

An incremental elastic-plastic Finite Element solver in a workstation cluster environment. Part I. Formulations and parallel processing, A. Feriani, A. Franchi and F. Genna 289–298
An incremental elastic-plastic Finite Element solver in a workstation cluster environment. Part II. Performance of a first implementation, A. Feriani and F. Genna 299–318

Multiple scaling
High-Reynolds number solutions of Navier–Stokes equations using incremental unknowns, O. Goyon 319–335
An asymptotic variational formulation for dynamic analysis of multilayered anisotropic plates, J.-Q. Tarn 337–353

Nonlinear mechanics
A unified contact algorithm based on the territory concept, Z.-H. Zhong and L. Nilsson 1– 16
A 4-node finite shell element for the implementation of general hyperelastic 3D-elasticity at finite strains, P. Betsch, F. Gruttmann and E. Stein 57– 79
A non-linear method for the propeller–rudder interaction with the slipstream deformation taken into account, D.-Q. Li 115–132
A computational framework for a class of fully coupled models for elastoplastic damage at finite strains with reference to the linearization aspects, E.A. de Souza Neto and D. Perić 179–193
The simulation of texture evolution with finite elements over orientation space. I. Development, A. Kumar and P.R. Dawson 227–246
The simulation of texture evolution with finite elements over orientation space. II. Application to planar crystals, A. Kumar and P.R. Dawson 247–261
Assessment of temporal integration schemes for the sensitivity analysis of frictional contact/impact response of axisymmetric composite structures, L. Karaoğlan and A.K. Noor 369–393

Numerical solution procedures
A unified contact algorithm based on the territory concept, Z.-H. Zhong and L. Nilsson 1– 16
A 2D Chebyshev differential operator for the elastic wave equation, J.M. Carcione 33– 45
A non-linear method for the propeller–rudder interaction with the slipstream deformation taken into account, D.-Q. Li 115–132
Thermoviscoelastic contact analysis with friction by an incremental thermal relaxation procedure, C.-M. Chang and W.-H. Chen 151–162
A computational framework for a class of fully coupled models for elastoplastic damage at finite strains with reference to the linearization aspects, E.A. de Souza Neto and D. Perić 179–193
The numerical determination of the Kelvin impulse of a bubble close to a submerged rigid structure, P.J. Harris 195–202
Stability of finite element models for distributed-parameter optimization and topology design, C.S. Jog and R.B. Haber 203–226
A rational model for the distortional buckling of tapered members, H.R. Ronagh and M.A. Bradford 263–277
An incremental elastic-plastic Finite Element solver in a workstation cluster environment. Part I. Formulations and parallel processing, A. Feriani, A. Franchi and F. Genna 289–298
An incremental elastic-plastic Finite Element solver in a workstation cluster environment. Part II. Performance of a first implementation, A. Feriani and F. Genna 299–318
Assessment of temporal integration schemes for the sensitivity analysis of frictional contact/impact response of axisymmetric composite structures, L. Karaoğlan and A.K. Noor 369–393

Optimization
Stability of finite element models for distributed-parameter optimization and topology design, C.S. Jog and R.B. Haber 203–226

Plasticity
A computational framework for a class of fully coupled models for elastoplastic damage at finite strains with reference to the linearization aspects, E.A. de Souza Neto and D. Perić 179–193
An incremental elastic-plastic Finite Element solver in a workstation cluster environment. Part I. Formulations and parallel processing, A. Feriani, A. Franchi and F. Genna 289–298
An incremental elastic-plastic Finite Element solver in a workstation cluster environment. Part II. Performance of a first implementation, A. Feriani and F. Genna 299–318

Shells and plates
A 4-node finite shell element for the implementation of general hyperelastic 3D-elasticity at finite strains, P. Betsch, F. Gruttmann and E. Stein 57– 79
Free vibration analysis of multilayered composite plates and shells with the natural approach, J. Zhu 133–149
An asymptotic variational formulation for dynamic analysis of multilayered anisotropic plates, J.-Q. Tarn 337–353

Solution of differential equations
A 2D Chebyshev differential operator for the elastic wave equation, J.M. Carcione 33– 45
On a new time integration method for solving time dependent partial differential equations, W. Zhong, Z. Jianing and X.-X. Zhong 163–178

Stability in structural mechanics
A rational model for the distortional buckling of tapered members, H.R. Ronagh and M.A. Bradford 263–277

Structural mechanics
A unified contact algorithm based on the territory concept, Z.-H. Zhong and L. Nilsson 1– 16
Thermoviscoelastic contact analysis with friction by an incremental thermal relaxation procedure, C.-M. Chang and W.-H. Chen 151–162
Assessment of temporal integration schemes for the sensitivity analysis of frictional contact/impact response of axisymmetric composite structures, L. Karaoğlan and A.K. Noor 369–393

Subsonic flow
Combined distributed and lumped parameters model for transient flow analysis in complex pipe networks, K.P. Ivanov and E.G. Bournaski 47– 56

Thermal effects and thermodynamics
Thermoviscoelastic contact analysis with friction by an incremental thermal relaxation procedure, C.-M. Chang and W.-H. Chen 151–162

Viscoelastic and viscoplastic media
A subdomain residual method for a posteriori error estimates of finite element solutions of viscoelastic fluid flows, H. Jin 93–113
Thermoviscoelastic contact analysis with friction by an incremental thermal relaxation procedure, C.-M. Chang and W.-H. Chen 151–162

Wave motion
A 2D Chebyshev differential operator for the elastic wave equation, J.M. Carcione 33– 45
Combined distributed and lumped parameters model for transient flow analysis in complex pipe networks, K.P. Ivanov and E.G. Bournaski 47– 56
Computational acoustics: noise reduction via diffraction by barriers with different geometries, A. Piacentini, M. Invernizzi and L. Pannese 81– 91
